

# Grass

# Caterpillars

## Creating and caring for your grass caterpillar

1. Get your colorful sock and fill it with soil.
2. Once it's full, tie a knot at the end to create a tail.
3. Now, use rubber bands to section off the head, body, and tail.
4. Stick two googly eyes on the head to give it a face.
5. Create antennae for your caterpillar from pipe cleaners.
6. Now you're finished! Give your caterpillar a name!

## Aftercare:

Put it on a sunny windowsill or outside on the ground (just make sure it doesn't get too hot in the sun). Water it a little bit every now and then. Keep trimming your caterpillar to keep it looking natural!
