

# Summer Bedding Care

For instant summer colour, to brighten up your beds, borders and containers use flowering bedding plants for immediate effect and long lasting summer colour.

When planting bedding plants we recommend that you mix in **Miracle Gro All Purpose Continuous Release Plant Food** with the compost as this fertiliser will feed your plants for up to six months. Keep your plants flowering for longer by removing any dead blooms to encourage new flower buds. Keep the areas between the plants free from weeds as they may steal water, nutrients and smother the plants.

Slug and snail killer should also be scattered sparingly around your plants to stop them being eaten. If bedding plants become infected with greenfly we recommend you use **Provado Ultimate Bug Killer** ready to use as this is a contact and systemic insecticide that will give protection against re-infestation for up to 6 weeks.
